## 992. Subarrays with K Different Integers

Given an integer array `nums` and an integer `k`, return the number of **good subarrays** of `nums`.

A **good array** is an array where the number of **different integers** in that array is exactly `k`.

- For example, `[1, 2, 3, 1, 2]` has 3 different integers: 1, 2, and 3.

A **subarray** is a **contiguous** part of an array.

nums = 

0	1	2	3	4
1	2	1	2	3

 , k = 2

Output = 7

{1, 2} , {2, 1} , {1, 2} , {2, 3}

{1, 2, 1} , {2, 1, 2} , {1, 2, 1, 2}
